

So I logged QualitativeMisstatementTable Props and I think this will greatly shape how we structure our redux config we did earlier and also how we will manage components like this one: QualitativeMisstatementTable so like in the User Story you saw Prior Period ABCOT misstatements, current period ABCOT Miststatements.. And in the below logs I was in Prior Period ABCOT misstatements

QualitativeMisstatementTable Props:(groupId: "1ede8c67-81e3-4c73-e95f-08dd40393aa2"
groupName: "Prior-period ABCOT misstatements") so I want us to make sure that if i'm on one widget it won'taffect the rest I know with this we will do a good job please i'm counting on you
